

ANTHONY WONG

+1 (647) 470-8825 | anthonywong2718@gmail.com | Markham, ON, Canada | LinkedIn | GitHub

PROFESSIONAL SUMMARY

A data engineer with 3+ years of experiences in **data modeling**, and designing, building, and maintaining end-to-end **data pipeline** for business intelligence and data analytics. Skilled in monitoring and optimizing **batch/streaming** workflows using **Python, SQL**, and **Apache Spark** for enhanced performance, reliability, and scalability in data infrastructures. Strong commitment to best practices in **data governance (quality assurance, data lineage, metadata, etc)** to ensure delivery of high quality data throughout the **ETL/ELT** processes. Proficient in managing cloud infrastructure on platforms like **Azure** and **GCP** on **Databricks**. Thrived in collaboration with cross-functional teams to drive data solutions for business objectives.

SKILLS

Skills: Python, SQL, Apache Spark, PySpark, MongoDB, Bash, Scala, Postgres, Pandas

AI & LLM: Vertex AI, LangChain, LLM-as-a-Judge, Gemini, RAG, Prompt Engineering, MCP, A2A

Cloud & Data Engineering: Databricks, GCS, BigQuery, Redshift, GCP, Azure, ADLS, Synapse, Unity Catalog

DevOps & Infrastructure: Git, Azure DevOps, Docker, Maven, Terraform, Kubernetes, Airflow, Cloud Run

PROFESSIONAL EXPERIENCE

Unilever

Agentic Data Engineer

Jan 2025 - Present

Toronto, ON, Canada

- Lead groundbreaking initiatives at Horizon3 AI Labs to innovate AI-powered solutions for internal business use cases (e.g. Material Price Forecasting, Procurement, Logistics, etc)
- Automated scraping, parsing, and vectorization of unstructured reports and new articles using Selenium, Parsel, and Vertex AI, storing embeddings in BigQuery to power semantic search for RAG systems.
- Designed and implemented an event-driven data ingestion for manually uploaded Excel files using Cloud Run, Pub/Sub, and Eventarc, optimizing 65% of Forecaster source updates in production.
- Constructed business-defined SQL query templates for 20+ logistics KPIs based on denormalized fact schema, boosting agent's text-to-SQL generation accuracy by 90% for complex prompts
- Enabled cross-platform data transfer from Azure Databricks to GCP using PySpark stored procedures and Delta-Share, decoupling PROD from DEV environment for rapid agent-building
- Modelled Medallion Architecture to extract, validate, transform, and publish quality-assured data for Graph Query Language (GQL) development with Dataflow, Cloud Composer, and Cloud Spanner

Export Development Canada

Data Engineer

Jan 2023 - Jun 2024

Toronto, ON, Canada

- Spearheaded the migration of the Centralized Insurance Data Mart (CIDM) to the Enterprise Data Platform (EDP) on Azure Databricks, using Python, SQL, and Apache Spark to eliminate at least \$600,000 in technical debt.
- Collaborated with data quality (DQ) analysts in an Agile development setting to identify data requirements and design/implement the DQ process in parallel using Scala, automating data governance practices and slashing annual cost by at least 58%.
- Improved table dependency handling using Databricks Delta Live Table (DLT) by storing materialized views in Unity Catalog (UC) schemas, collapsing multiple DLT pipelines to reduce workflow runtime by 40% on average.
- Led a data source switching project by bringing masked version of existing data into the EDP from an AWS RDS source, developing a comprehensive test suite to compare data from the two sources, and achieving a 99.4% overall consistency
- Facilitated production release and source codes configuration management on Azure DevOps with Apache Maven, monitoring development work and the deployment lifecycle, debugging script errors using Bash to facilitate the approval process.
- Researched and unified notification practices across squads by configuring SQL query and alert templates with Databricks API connector, enabling timely notification of Qlik replication failure for application sources including CIS, C3, and PSFIN.

EDUCATION

University of Toronto

Bachelor's, Statistics

Sep 2018 - Jun 2022

- Statistical Methods for Machine Learning I & II, Data Science with R, Mathematics
